Answer Key: Section 2

Question Number	Question	Answer
1	How many estimates of the performance metrics can you get when using K-fold cross validation?	K
2	Besides getting a more accurate estimation of the performance metrics, K-fold cross-validation is useful for:	Hyper-parameter tuning
3	What are hyper-parameters?	Parameters that are not directly learnt within estimators
4	Which scikit-learn class is used to look for the best parameters from a specified grid using cross-validation?	GridSearchCV
